

Employment Verification System inside our Job Portal using:

- PHP MVC (OOP structure)
 - MySQL (normalized schema)
 - Tailwind CSS (modern UI)
 - Alpine.js (dynamic UI interactions)
 - Secure Token-based verification
 - Professional SaaS-level architecture
 - Admin automation + manual override
 - Razorpay / Payment Gateway integration
 - PDF report generation
 - OCR support-ready structure
 - Risk scoring engine
 - Audit logs
-

CORE OBJECTIVE

When:

Candidate fills previous employment →

Portal verifies →

Employer sees “Employment Verified ✓” badge →

Employer can pay ₹999 to unlock detailed verification report →

Admin controls everything.

3 LEVEL VERIFICATION SYSTEM (MANDATORY)

LEVEL 1 – DOCUMENT VERIFICATION

Candidate uploads:

- Offer Letter (PDF only)
- Relieving Letter (PDF only)

- Experience Letter
- 3 Salary Slips
- Optional: Bank Statement
- Optional: Form 16

System Requirements:

- Allow PDF only
- Max file size 5MB
- Store original file + hash
- Store metadata
- Store upload timestamp
- Generate document hash (SHA256)
- Prepare OCR-ready architecture (table for extracted text)

Status States:

- Pending Review
- Auto-Flagged
- Approved
- Rejected

Auto flag if:

- Name mismatch
- Date mismatch
- Overlapping employment
- Suspicious metadata

LEVEL 2 – OFFICIAL HR VERIFICATION

Candidate must provide:

- HR Official Email (must be domain email)
- HR Phone
- Reporting Manager Email (optional)
- Company Website
- CIN / GST (optional)

Validation rules:

Reject:

gmail, yahoo, rediffmail etc.

Accept:
hr@companydomain.com

Automated Email System

Send email:

Subject:
Employment Verification Request – [Candidate Name]

Email must include:

- Candidate Name
- Employee ID
- Employment Period
- Designation
- Secure verification link
- Expiry time (72 hours)

Use signed token with expiry.

HR Response Portal

Secure public form (token validated).

HR confirms:

- Was employee working?
- Duration
- Designation
- Rehire eligibility
- Any misconduct
- Remarks

Status:

Verified
Mismatch
No Response
Declined

LEVEL 3 – ADVANCED VERIFICATION

Add:

- Domain matching (HR email vs website vs document)
 - Company registry validation structure (CIN / GST)
 - Risk scoring engine
 - LinkedIn cross-check ready structure
 - EPFO ready structure (future)
-

FRAUD & RISK SCORING ENGINE

Create scoring system:

Official HR Verified → +50
Docs match OCR → +20
Domain matched → +10
No HR response → -20
Metadata suspicious → -30
Date overlap → -25

Score Output:

70+ → Fully Verified
40–69 → Partially Verified
Below 40 → Unverified

Store score in DB.

Only admin sees full score.

Employer sees final status only.

Candidate sees only:

Under Review
Verified
Not Verified

No internal reason shown to candidate.

PANEL REQUIREMENTS

Candidate Panel

Features:

- Upload employment details
- Upload documents
- Provide HR contact
- Consent checkbox (mandatory)
- Status tracking
- Verification timeline

Candidate sees:

-  Under Review
-  Verified
-  Not Verified

No internal comments visible.

Employer Panel

Show:

Candidate profile
Verification badge

If employer wants detailed verification report:

Show:

“Unlock Verified Employment Report – ₹999”

Dynamic pricing from admin panel.

After payment:

Employer can:

- View verification details

- Download PDF report
 - See verification date
 - See verified by portal
-

Admin Panel (Critical)

Admin dashboard must show:

- All employment records
- Risk score
- Flagged mismatches
- HR response logs
- Email logs
- IP logs
- Audit trail
- Payment logs
- Report generation
- Manual override
- Mark verified / reject
- Resend verification email
- Set dynamic price per verification
- Revenue analytics

Admin can:

Approve manually

Reject manually

Request additional docs

Upload internal remarks (hidden from candidate)

PAYMENT SYSTEM

- Employer pays ₹999 (dynamic configurable)
- Payment stored per employment record
- Razorpay integration ready
- Generate invoice
- Track payment status

Only after payment:

Employer can download:

Verification Report PDF

VERIFICATION REPORT FORMAT (PDF)

Must include:

Candidate Name

Company Name

Designation

Employment Period

Verification Date

Verification Method

Risk Score Category

Final Status

Verified by:

“Mindware Employment Screening Division”

Downloadable PDF.

DATABASE STRUCTURE (Required Tables)

employment_records

employment_documents

verification_requests

verification_responses

verification_scores

verification_logs

audit_logs

payments

employer_unlocks

admin_notes

All foreign keys properly structured.

LEGAL & PRIVACY

Add:

Mandatory consent checkbox
Privacy policy agreement
Data encryption for documents
Signed token verification links
Email expiry tokens
GDPR-ready structure
Audit logs

Candidate must authorize:

“I authorize the portal to contact previous employer for verification.”

UI DESIGN

Use:

Tailwind CSS modern cards
Soft gradients
Status badges
Progress trackers
Clean SaaS dashboard style
Mobile responsive
Alpine.js dynamic toggles

Design must be:

Enterprise level
Clean
Minimal
Professional

AUTOMATION REQUIREMENTS

- Auto email triggers
 - Reminder email after 48 hours
 - Mark no response after 5 days
 - Risk auto calculation
 - Auto badge display
 - Admin notifications
 - Employer notifications
 - Candidate notifications
-

RELIABILITY REQUIREMENTS

Never auto mark verified without HR confirmation.

Reject free mail domains.

Maintain full audit logs.

All actions time stamped.

IP logging required.

Admin override possible.

FUTURE READY STRUCTURE

Prepare architecture to support:

EPFO API

GST validation API

DigiLocker integration

AI document fraud detection

FINAL GOAL

System must:

Be scalable.

Be secure.

Be SaaS ready.
Be enterprise grade.
Be monetizable.
Be legally compliant.
Be fraud resistant.
Be transparent yet confidential.

When complete:

Candidate uploads →
System verifies →
Admin reviews →
HR confirms →
Risk calculated →
Employer sees verified badge →
Employer pays →
Employer downloads official verification report.

END OF MASTER PROMPT.

This prompt will force Trae AI to build:

- ✓ Enterprise architecture
- ✓ Automation + manual control
- ✓ Monetization
- ✓ Legal compliance
- ✓ Fraud detection
- ✓ SaaS-ready structure
