Note on Data: Youth unemployment rates can fluctuate significantly quarter-to-quarter and are sensitive to the specific age range used (e.g., 15-24 or 18-29). The "Data Year" reflects the latest period reported by major organizations, prioritizing 2024 where monthly or quarterly data is available.

Key Observations:

- **Highest Rates:** Dominated by countries in Africa (South Africa) and the Middle East/Southern Europe (Palestine, Spain, Greece).

- **India's Position:** India's youth unemployment rate, at around 17.0%, is slightly higher than the average for developed economies (like the US or Canada) but significantly lower than crisis-level rates seen in places like South Africa.
- **Lowest Rates:** Several developed East Asian and Central European countries (Japan, Germany, South Korea, Switzerland) report the lowest rates.
